

Ahmad Ali Rajpoot

Cybersecurity Analyst

ahmadarajpoot87@gmail.com • +92 336 3333279 • Rawalpindi, Pakistan • linkedin.com/in/ahmad-ali-rajpoot

PROFESSIONAL PROFILE

Cybersecurity undergraduate with hands-on SOC experience in incident triage, malware analysis, and EASM/DAST tool testing, backed by a strong foundation in vulnerability assessment, penetration testing, secure application development, and shipping full-stack and AI-automation projects for real clients.

EDUCATION

Bachelor of Cyber Security · COMSATS University Islamabad

Sept 2023 to Present

EXPERIENCE

SOC Intern (SOC L1) · LMKR

Jul 2026 to Aug 2026

- Investigated incidents in Palo Alto Cortex XDR, analyzed flagged files via VirusTotal and WildFire, and documented findings for SOC L2 handoff.
- Pulled asset, host, and network context, coordinating with TAC for device and user identification during investigations.
- QA tested OreHammer (RaptiCore), an EASM/DAST platform, validating alert triage workflows against live infrastructure.
- Completed BTLO SOC Labs, Incident Response, and Digital Forensics challenges.

Event Marketing Team Member · Idea Society, COMSATS

Oct 2023 to Jul 2025

- Led digital campaigns and coordinated cross-functional teams to plan and execute university events.

PROJECTS

Life Map · local-first personal OS, client project

- Built an AI-assisted, Obsidian-compatible personal OS for a returning U.S. client: fully local-first with no third-party server dependency, gamified tracking, and hardened, password-gated access.

Vermilion · autonomous sales intelligence agent, 24-hour hackathon

- Built an evidence-grounded sales agent with automated research and outreach, human approval gates, and persistent memory across sessions.

VulnScope · automated web vulnerability scanner

- Built an automated SQL Injection and XSS scanner with a web crawler for endpoint enumeration, replicating OWASP-aligned penetration testing workflows.

Stripped Binary Reverse Engineering

- Reverse-engineered a fully stripped binary in IDA Pro and Ghidra, reconstructing program logic and producing annotated pseudocode through manual assembly-level analysis.

TECHNICAL SKILLS

Security: Vulnerability Assessment, Penetration Testing, Threat Detection, Incident Response, SOC Alert Triage, Network Security, Log Analysis

Tools: Cortex XDR, VirusTotal, WildFire, Burp Suite, Metasploit, Nmap, Wireshark, IDA Pro, Ghidra

Programming & Networking: Python, C/C++, Java, Assembly, TCP/IP, DNS, DHCP, Subnetting

Platforms: Kali Linux, Ubuntu, Windows
